USE OF GREEN TEA IN COPRICE WORKING DOG PRODUCTS

On 21 March 2019, GRV published a notice on its website providing guidance to participants about the use of green tea in CopRice Working Dog Products, and other products that have green tea listed as an ingredient. GRV submitted a sample of CopRice Adult Working Dog (Beef, Vegetable & Brown Rice) kibble to its laboratory, and can report that no caffeine was detected in the sample.

CopRice also provided the results of its own testing from the National Measurement Institute to GRV, which also reported no caffeine was detected in the samples.

Although the tests results came back negative to caffeine, ORI would like to remind participants that green tea may contain caffeine and participants should remain careful and diligent when providing it to racing greyhounds.

Participants wanting to know more about the CopRice Working Dog products or testing can contact CopRice via phone on 1800 029 901 (Australia) or 0508 267 742 (New Zealand).
