

Short-Tailed Shearwater (Muttonbird) - Non-Commercial Harvesting Game Season 2018 – Recreational Licences

Non-Commercial Harvesting - Licence requirements

Anyone who wishes to harvest Short-tailed Shearwaters (Muttonbirds) can do so only during the period of the open season for Muttonbird that is declared each year.

A Muttonbird licence must be purchased prior to undertaking any harvesting. These licences can be obtained from any Service Tasmania shop; through the game licensing website at www.dpipwe.tas.gov.au/wildlife-management; or by posting a completed game licence application form together with a cheque or money order (made out to the Department of Primary Industries, Parks, Water and Environment) to the Wildlife Management Branch, DPIPWE, GPO Box 44, Hobart 7001.

A date of birth is required for all persons purchasing a non-commercial Muttonbird licence. Full name and postal and/or residential addresses are also required.

Where can you go to legally harvest Muttonbirds?

Some colonies are opened each year for non-commercial Muttonbird harvesting. Those colonies that are open for harvest during the 2018 Non-Commercial Muttonbird Season are listed on the reverse side of this sheet.

Regulations relating to harvesting

Muttonbird harvesters must note:

- Night-birding is prohibited ("night" is between 1 hour after sunset and 1 hour before sunrise).
- Use of pointed, sharpened, barbed or hook shaped or sharpened implements is prohibited.
- Dogs may not be used.
- Interfering with, damaging or destroying burrows is prohibited.
- Licences are issued to one person only. The taking of Muttonbirds under another person's licence (including family members) is unlawful.

Burrow damage

Muttonbirds use the same burrow year after year; please reduce damage by minimising the distance you travel in colonies and trying to avoid damaging burrows.

Guidelines for the Humane Killing of Muttonbirds (Short-tailed Shearwater)

The *Animal Welfare Act 1993* prescribes penalties for persons who do not kill Muttonbird chicks in a humane manner. It is your responsibility to kill any chicks harvested quickly and humanely.

The following methods have been approved as Animal Welfare Guidelines under s44B of the *Animal Welfare Act 1993*. These guidelines provide instructions which, if followed, will ensure that the killing of Muttonbirds is carried out in a way which ensures animals are killed as efficiently as possible with a minimum of suffering.

It is the responsibility of the harvester to use the method that will ensure a humane kill that does not cause unreasonable or unjustifiable pain or suffering to the chick.

The following method is recommended as suitable for use by more experienced muttonbirders, including those killing chicks for commercial or cultural purposes:

1. *Immediately upon removing the bird from the burrow, secure the head firmly between the index and middle fingers of one hand, just below the skull.*
2. *Secure the head in place with the thumb.*
3. *Raise the bird in a pendulum movement to a near vertical position (head now facing down).*
4. *In one fluid movement drop the bird (or allow the bird to fall) until it reaches a position just lower than horizontal (when the weight of the bird is felt), then snap the hand and wrist upwards and towards yourself (as when cracking a whip) while pressing the thumb firmly into position below the base of the skull.*

The following method is recommended as suitable for use by less experienced muttonbirders:

1. *Hold the bird by the feet, head down, in one hand.*
2. *Place the index and middle fingers of the other hand in the form of a V immediately behind the bird's skull.*
3. *Finally turn the bird's head upwards and away. This method immediately dislocates the neck and results in a quick, painless death.*
