INFORMATION SHEET

ATTENTION ALL THOROUGHBRED TRAINERS

Please find attached a document which outlines Welfare Guidelines for Thoroughbred Horses.

The Office of Racing Integrity considers that animal welfare forms a significant part of our regulatory function. It is an area that both ourselves as Regulator and you as the Trainer have a mutual obligation to ensure that the welfare of the horse is paramount.

In the upcoming months the Stewards will be visiting your stable premises with the primary purpose of inspecting and giving advice on matters that relate to horse welfare as they pertain to Rules of Racing.

Our inspection process will consist of the following:

- complete audit of horses that are listed on your stable return compared to the horse's that are physically located at your property
- visual inspection of all registered horses on your property
- inspection of log books and advice on what is to be recorded in them going forward
- inspection of feed room and whether there are adequate supplies of feed in relation to the amount of horses kept on the property
- the names of your ancillary service providers eg veterinarian, farrier, dentist, chiropractor etc

I would like to emphasise that the purpose of these inspections is to provide advice to trainers and for us to obtain feedback from you on where we can all improve (if anywhere) in relation to horse welfare.

These inspections are in addition to Stewards random and race day inspections.

Yours sincerely

Anthony O'Connell
CHAIRMAN OF STEWARDS

WELFARE GUIDELINES FOR AUSTRALIAN
THOROUGHBRED HORSE RACING

The Australian racing industry is committed to the welfare of the Australian racehorse.

The Australian Rules of Racing contain provisions relating to the principles within this document.

These Guidelines may be modified from time to time and the views of anyone interested in horse welfare are welcomed. Particular attention will be paid to new research findings, and the Australian racing industry encourages further funding and support for welfare studies.

1. At all stages during the preparation and presentation of horses for racing their welfare should be a primary consideration.

Good horsemanship
The housing, feeding and training of racehorses should be consistent with good horsemanship and must not compromise their welfare. Any practices whether in stables, training or racing which are inconsistent with contemporary standards of husbandry should not be tolerated.

Training methods
Breaking and training methods which unreasonably influence the normal behaviour of racehorses should not be used. Horses should only be given training schedules which are suited to their physical capabilities and level of maturity.

Shoeing
Horse shoes and racing plates should be designed and fitted to minimise the risk of injury.

Transport
The risk of injury and disease should be minimised when racehorses are transported. Vehicles should be safe, clean, well ventilated, regularly maintained and disinfected.

Rest periods
Long journeys should be planned carefully and horses allowed regular rest periods and access to water. Respiratory problems can often be reduced if horses are able to lower their heads to ground level during rest periods.

2. Horses should be suitably conditioned and healthy before being allowed to compete.

Veterinary examinations
A veterinary examination should be undertaken of any horse showing signs of disease, lameness or other ailment to determine its suitability to race.

Immaturity
Horses mature at widely different rates. Training and racing schedules should be carefully planned to minimise the risk of musculo-skeletal injuries.
Surgical procedures
Any surgical procedure which threatens the welfare or safety of any horse or rider should not be allowed in racing.

Severe or recurrent clinical conditions
Horses with severe or recurrent clinical conditions should, on veterinary advice, be temporarily or permanently excluded from racing.

Pregnant mares
Mares should not be raced beyond 120 days of pregnancy.

3. Conditions of racing should not prejudice horse welfare.

Racecourse conditions
Racecourses and racing surfaces should be designed and maintained to reduce risk factors which may lead to injuries. Particular attention should be paid to crossings, uneven racing surfaces and extremes of surface quality.

Steepleschasing and hurdlng
Participation in these races should be restricted to horses with demonstrated jumping ability. Weights to be carried, race distance, number, size and design of fences should all be carefully assessed when planning these races.

Extreme weather
Due care and attention should be paid to the welfare of horses racing in extreme weather. Provision should be made to cool horses quickly after racing in hot and/or humid conditions.

Misuse of the whip
Excessive, unnecessary or improper use of the whip cannot be condoned, for example, on a beaten horse, a horse unable to respond or a horse clearly winning. Any post-race whip welts clearly indicate injury.

Medication
One purpose of the rules controlling medication is to protect the welfare of the horse and the safety of riders. After any veterinary treatment, sufficient time should be allowed for recuperation before competition. Drugs should not be allowed to influence the racing performance of the horse or to conceal genetic or acquired conditions.

Racecourse accommodation
Racecourse accommodation for horses should be safe, hygienic, comfortable and well-ventilated. Fresh drinking water and washing-down water should always be available.

Starting gates/barriers
Horses should be educated so as to be familiar with loading procedures. Barriers should be properly designed and safe. Aids to loading should be humane.

4. Racehorses should receive proper attention after they have raced and be treated humanely when their racing careers are over.
Veterinary treatment
When a horse is injured during a race the jockey should dismount. Veterinary expertise should be available on the racecourse. Injured horses should be given full supportive treatment. If required the horse should be transported to the nearest referral centre for further assessment and therapy.

Racing injuries
The incidence of injuries sustained in racing and training should be monitored wherever possible. Track conditions, frequency of racing, age and any other risk factors, should be carefully examined to indicate ways to minimise severe injuries.

Euthanasia
If injuries are sufficiently severe the horse may need to be euthanased. Euthanasia should be undertaken as soon as possible with the sole aim of minimising suffering.

Retirement
Owners should attempt to ensure that their horses are sympathetically and humanely treated when they leave racing. Racehorses should be permanently identified and registered, so that instances of mistreatment during retirement can be pursued.

These Guidelines were adapted from the International Group of Specialist Racing Veterinarians Welfare Guidelines for Horseracing
